

## beauty q+a

**Q** My eyelids tend to be oily. How do I prevent my eye makeup from smudging all the time?

Our eyelids contain oil glands just like the rest of our face, says Dr Patrina Wong at Linc Aesthetic Clinic. Some secrete more sebum in their eyelids than others. One solution is to apply a makeup primer and set it with lots of powder before applying your eye makeup. Or apply a similar-coloured eyeshadow over the eyeliner, since eyeliner is usually the cause of smudges. Also, waterproof mascaras tend to run less, so switch to those.
